

MUJEEB UR REHMAN

Software Engineer | Python Developer | Full Stack Developer | AI & Automation Developer
Rajapur, Pakistan • 0306-6661853 • meemsproduction@gmail.com • themujeeb.dev • github.com/mujeebbutt

PROFESSIONAL SUMMARY

Motivated final-year BS Computer Science student (graduating August 2026) with 2+ years of freelance software development experience, delivering multiple commercially deployed applications across inventory management, billing, e-learning, and e-commerce. Proficient in Python, full-stack web development (Firebase, Django, HTML/CSS/JS), and AI/automation engineering — including RAG pipelines, vector databases, and LLM integration. Also produces complete Final Year Project documentation packages (SRS, SDD, reports, presentations) for BSCS clients. Reduced client workloads by automating manual processes across multiple projects, achieving consistent client satisfaction. Actively seeking remote or Pakistan-based junior/entry-level roles in software engineering, Python development, full-stack, or AI automation.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, HTML, CSS, Java (Fundamentals)

AI & Machine Learning: FastAPI, Google Gemini API, Sentence Transformers, ChromaDB, RAG Pipelines, LLaMA 3 (Ollama), Whisper STT, Prompt Engineering

Web & Backend: Firebase (Firestore, Auth, Storage, Hosting), Django, REST APIs, HTML/CSS/JS, Python scripting

Desktop & Automation: PyQt6, yt-dlp, subprocess automation, file system scripting

Databases: MySQL, SQLite, Firebase Firestore, ChromaDB (vector database)

IoT & Hardware: ESP32-S3, Arduino Uno, PlatformIO, TFT Displays, SPI/GPIO interfacing

Tools & Platforms: Git, GitHub, VS Code, Android Studio, Firebase CLI, Adobe Premiere Pro, After Effects

Soft Skills: Client Requirement Gathering, End-to-End Project Delivery, Technical Documentation, Post-Deployment Training

PROFESSIONAL EXPERIENCE

Freelance Software Developer 2025 – Present

Self-Employed | Fiverr & Direct Clients | Remote / Rajapur, Pakistan

- Delivered a Python-based Pharmacy Inventory Management System to a live pharmacy client, cutting manual stock-tracking time by an estimated 60% and eliminating paper-based record errors.
- Built and deployed a Restaurant Management System for a client, covering order taking, table/billing management, and menu and inventory tracking to replace manual order-taking and billing.

- Re-architected Mehwish Online Institute's LMS from a fragmented 3-backend stack (Flask/Node.js/MySQL) to a unified Firebase platform — reducing system downtime to near-zero and supporting 100+ active student accounts.
- Shipped role-based teacher and student dashboards with Firebase Auth, Firestore security rules, and CORS-resolved file upload workflows, cutting per-assignment grading admin effort by roughly 40%.
- Commercialized a Python + SQL Inventory & Billing System for 2 local retail businesses; provided post-deployment training to 5+ staff members, achieving a consistent client satisfaction rate across all deployments.
- Managed full project lifecycle independently — requirements gathering, development, deployment, and support — for multiple paid client engagements on Fiverr and direct referrals.
- Delivered complete Final Year Project documentation packages (SRS, SDD, DOCX reports, PPTX presentations, viva prep guides, diagram sets) for multiple BSCS students at IUB, covering Django and web-based systems.

PROJECTS

AI-Powered Exam Paper Generator Final Year Project | 2025–2026

Python · FastAPI · Google Gemini 2.5 Flash · ChromaDB · Sentence Transformers · RAG · OCR

- Architected a full RAG pipeline that ingests scanned PDFs and textbooks via OCR, embeds content using Sentence Transformers, and stores 1,000+ document chunks in ChromaDB for semantic retrieval.
- Slashed exam preparation time for educators by automating question generation across 3 formats (MCQs, short answer, descriptive) and 3 difficulty levels via Google Gemini 2.5 Flash.
- Reduced question paper creation from hours to under 2 minutes per paper in test evaluations, demonstrating measurable automation impact in an academic setting.
- Completed full IEEE-format SRS and SDD documentation and passed the formal university FYP defense panel review.

Restaurant Management System Client Project | 2026

Python · SQL · Desktop/Web Application · Business Automation

- Designed and delivered a Restaurant Management System handling order entry, table management, billing, and menu/inventory tracking for a client business.
- Automated end-to-end order-to-bill workflow, reducing manual order errors and speeding up table turnover during peak hours.
- Provided post-deployment training and support to on-site staff for day-to-day operation of the system.

Clothy — Clothing E-Commerce PlatformFYP Documentation & Development | 2026

Python · Django · HTML/CSS/JS · UI/UX Design

- Delivered a complete Django-based e-commerce platform build and FYP documentation package for a client student, including product catalog, cart/checkout flow, and admin management.
- Produced full submission deliverables — SRS, SDD, DOCX report, PPTX presentation, folder scaffolding, and UI design prompts — for university evaluation.

BookVerse — E-Book Management SystemFYP Documentation & Development | 2026

Python · Django · HTML/CSS/JS · Database Design

- Built a Django-based e-book management platform covering catalog browsing, user accounts, and book lending/management workflows.
- Delivered complete FYP documentation — SRS, SDD, DOCX report, PPTX presentation, and diagram sets — for formal university submission.

LibConnect — WhatsApp-Based Library Management SystemFYP Documentation & Development | 2026

Python · WhatsApp API Integration · Database Design

- Developed a WhatsApp-integrated Library Management System enabling book search, issue/return requests, and notifications directly through WhatsApp.
- Produced full FYP documentation package — SRS, SDD, report, presentation, and viva preparation materials — for university defense.

JARVIS-Style AI Voice Assistant (Tomorrow AI)2024–2025

Python · Whisper STT · edge-tts · Ollama (LLaMa 3 / phi3:mini) · SQLite · Automation

- Engineered a fully offline AI assistant combining OpenAI Whisper for real-time voice transcription, edge-tts for multilingual speech output (Urdu/English), and SQLite for persistent conversation history across sessions.
- Achieved sub-3-second response latency on local hardware by optimizing LLM backend selection between phi3:mini and qwen2.5 via Ollama — removing cloud API dependency entirely.
- Tailored the assistant for Pakistani users with Urdu voice output (ur-PK-UzmaNeural) and Hinglish conversational tone, addressing a gap in locally-relevant AI tooling.
- Structured the codebase for ESP32 IoT hardware integration, laying groundwork for a physical smart assistant device — one of fewer than 5 such hobby projects publicly documented in Pakistan.

Library Management System2024

Python · SQLite · Modular Desktop Application · Database Design

- Built a complete desktop Library Management System handling 500+ book records, member registration, and issue/return workflows with automated overdue notifications.

- Cut catalogue search time by over 70% versus manual logbooks by introducing indexed SQLite queries and a keyword search interface.
- Applied 3NF-normalized database schema and separation-of-concerns architecture, demonstrating production-quality software engineering for an academic institution context.

Mehwish Online Institute — Full LMS PlatformClient Project | 2026

Firestore · Firebase Auth · Firebase Storage · HTML/CSS/JS · SEO

- Migrated the institute's entire platform from 3 conflicting backend technologies to a single Firebase architecture, eliminating all deployment errors and reducing ongoing infrastructure cost to \$0/month (Firebase Spark tier).
- Deployed role-based dashboards serving 2 user types (teachers, students) with individual assignment tracking, submission portal, and graded feedback workflows.
- Boosted organic discoverability by implementing Schema.org markup, meta tags, and WhatsApp enrollment CTAs — contributing to a measurable increase in new student inquiries post-launch.

Private Cloud File Storage System2025–2024

Python · Networking · File Management · User Authentication

- Constructed a self-hosted private cloud server supporting secure upload, retrieval, and permission-based access for multiple user accounts — eliminating reliance on third-party storage services.
- Hardened the system with session-based authentication and per-user file isolation, applying core backend security principles to protect sensitive files.

Inventory Management & Billing System (Commercial)2025

Python · SQL · Desktop Application · Business Automation

- Conceptualized, built, and sold a standalone Python + SQL billing and inventory application to 2 retail clients, replacing entirely manual workflows with automated invoicing and real-time stock tracking.
- Processed 100+ daily transactions in production after deployment; trained 5+ non-technical staff members in under 2 hours per session, with zero reported critical bugs post-launch.

Portfolio & Business Websites2025 – Present

HTML · CSS · JavaScript · Firebase Hosting · SEO

- Launched and maintain multiple live production websites — personal coding portfolio (themujeeb.dev), creative portfolio (MeemsProduction), and client sites — all hosted on Firebase with custom domains.
- Optimized for Core Web Vitals and mobile responsiveness, targeting 90+ Lighthouse performance scores across deployments.

RESEARCH PUBLICATIONS

Neural Networks for Intelligent IoT Systems: Architectures, Applications, and Edge Deployment ChallengesUnder Review

IEEE Format · Status: Submitted, Under Review

- Co-authored a research paper examining neural network architectures for IoT systems, covering applications and challenges of deploying models on edge/resource-constrained devices.

Event-Driven Access System: Arduino-Uno Smart Lock with Proximity Sensing and Deactivation-Driven Keypad AuthenticationUnder Review

IEEE Format · Status: Submitted, Under Review

- Co-authored an IEEE-formatted paper presenting an Arduino Uno-based smart lock system using proximity sensing and deactivation-driven keypad authentication, demonstrated at a university exhibition.

EDUCATION

BS Computer Science (BSCS)Expected: August 2026

The Islamia University of Bahawalpur, Pakistan | 8th Semester

- Relevant coursework: Machine Learning, Data Mining & Warehousing, Object-Oriented Software Engineering, IT Project Management, Database Systems, Computer Networks.
- Final Year Project: AI-Powered Exam Paper Generator — presented to and approved by university defense panel; full IEEE SRS & SDD documentation produced.

ADDITIONAL

Languages: English (Professional Proficiency), Urdu (Native), Punjabi (Native)

Content Creation: Producer of AI education YouTube content (themujeeb.dev brand) — 5+ episodes covering AI concepts, scripted and edited using Adobe Premiere Pro & After Effects.

Availability: Immediately available. Open to remote, full-time, part-time, and internship arrangements. Willing to relocate to Lahore, Islamabad, or Karachi.
